# Government and the Economy: An Environmental Perspective

## California Education and the Environment Initiative

Approved by the California State Board of Education, 2010

### The Education and the Environment Curriculum is a cooperative endeavor of the following entities:

California Environmental Protection Agency  
California Natural Resources Agency  
Office of the Secretary of Education  
California State Board of Education  
California Department of Education  
California Integrated Waste Management Board

### Key Leadership for the Education and Environment Initiative:

**Linda Adams**, Secretary, California Environmental Protection Agency  
**Patty Zwarts**, Deputy Secretary for Policy and Legislation, California Environmental Protection Agency  
**Andrea Lewis**, Assistant Secretary for Education and Quality Programs, California Environmental Protection Agency  
**Mark Leary**, Executive Director, California Integrated Waste Management Board  
**Mindy Fox**, Director, Office of Education and the Environment, California Integrated Waste Management Board

### Key Partners:

Special thanks to **Heal the Bay**, sponsor of the EEI law, for their partnership and participation in reviewing portions of the EEI curriculum.

Valuable assistance with maps, photos, videos and design was provided by the **National Geographic Society** under a contract with the State of California.

## Lesson 1 Turning Environmental Challenges into Economic Opportunities

Key Unit Vocabulary . . . . .	2
New Types of Waste; New Solutions to Handling Waste . . . . .	4

## Lesson 2 Economic Benefits and Costs of Environmental Regulation

The Challenges of Environmental Laws . . . . .	6
Environmental Laws and the Economy . . . . .	10

## Lesson 3 Cap and Trade

Emissions Allowances and Environmental Protection . . . . .	13
Cap and Trade System: Analysis . . . . .	21

## Lesson 4 Fiscal Policy and the Environment

Comparing Elements of Fiscal Policy . . . . .	22
Evaluating the Use of Fiscal Policy in Protecting the Environment . . . . .	23

## Lesson 5 Applying Fiscal Policy

Identifying Solutions . . . . .	25
Applying Fiscal Policy to Environmental Decisions . . . . .	27

## Key Unit Vocabulary

Lesson 1 | page 1 of 2

---

**Additionality:** A condition for a project to qualify as a project under the Clean Development Mechanism (CDM) that requires proof that the project would not otherwise be built without the incentive of the sale of credits.

**Biomass:** Plant material (wood, grains, agricultural waste, vegetation) sometimes used as an energy source.

**Cap and trade:** A regulatory tool that utilizes market systems to achieve an environmental goal. The government establishes a level of acceptable emissions (a cap) and allows companies to trade emission allowances to comply with the law.

**Carbon dioxide:** A colorless gas that is a byproduct of respiration and combustion, and is absorbed by vegetation and phytoplankton.

**Carbon monoxide:** A colorless, highly poisonous gas and a byproduct of combustion.

**Carbon offset:** A financial instrument (measured in metric tons of carbon dioxide-equivalent) that represents verified reductions in carbon emissions.

**Carbon sink:** A carbon reservoir that takes up more carbon than it is releasing or emitting, such as a forest.

**Clean Development Mechanism (CDM):**

A program created under the Kyoto Protocol that provides a method by which developing countries can undertake emission reduction projects and get paid for verified reductions in carbon emissions.

**Command and control policies:** Government regulations that limit or prohibit certain practices.

**Crop rotation:** Varying the crops on a piece of land in a planned series to save or increase the mineral or organic content of the soil, to increase crop yields, and to control or lessen insects and plant diseases.

**Ecosystem services:** The functions and processes that occur in natural systems, such as pollination, that support or produce ecosystem goods and help sustain human life, economies, and cultures.

**Emission allowances:** A permit to emit a unit of emission.

**Emissions:** The release of matter or energy into the environment including gases, particulates, noise, vibrations, light, heat, radiation, and odors.

**E-waste:** Unwanted electronic devices, such as old cell phones and outdated computers, that contain hazardous wastes, such as lead and mercury.

**Excise tax:** A tax levied on the manufacture, sale, or use of products based on the quantity of the product, typically applied to consumables, such as gasoline, tobacco, and alcoholic beverages.

**Externality:** Indirect effects or costs to third parties resulting from economic decisions.

**Fiscal policy:** An economic policy of the federal government that involves the use of taxes and spending to make adjustments in the economy.

**Global climate change:** A long-term significant change in Earth's climatic patterns.

**Landfill:** A disposal site where solid waste is buried between layers of dirt.

**Marginal benefit:** The additional benefit gained by producing one additional unit of a good.

**Marginal cost:** The cost incurred by producing one additional unit of a good.

**Mercury:** A highly toxic metal that is liquid at room temperature and has many industrial uses.

**Natural resources:** Materials, such as water, minerals, energy, and soil, that people use from nature and natural systems.

## Key Unit Vocabulary

Lesson 1 | page 2 of 2

---

**Natural system:** The interacting components, processes, and cycles within an environment, as well as the interactions among organisms and their environment.

**Opportunity cost:** The foregone economic benefit from the next best action to be taken.

**Policy:** A broad statement that describes how groups, organizations, and governments intend to implement or enforce their rules, regulations, and laws.

**Regulation:** A specific rule created by a government agency or other legislative authority to implement and enforce laws and policies.

**Subsidy:** Government funds given to support an enterprise that is considered beneficial to the public.

**Symbiosis:** A relationship of mutual benefit or dependence.

**Tax credit:** A reduction in taxes or application of money spent as being credited toward taxes owed.

**Tax shifting:** A tax policy that eliminates or reduces one or more taxes and establishes or increases other taxes such that the overall revenue is the same.

**User fee:** A charge for the use of a publicly owned or operated facility, such as a national park.

## New Types of Waste; New Solutions to Handling Waste

Lesson 1 | page 1 of 2

---

Name: \_\_\_\_\_

**Instructions:** Read and answer each of the questions below. (3 points each)

1. What is e-waste? Provide two examples.

---

---

---

---

---

2. What makes e-waste dangerous? Name two hazardous materials used in constructing electronics.

---

---

---

---

---

3. How might these hazardous waste products cause health problems if they end up in a landfill?

---

---

---

---

---

4. How does the Electronic Waste Recycling Act work to encourage recycling?

---

---

---

---

---

## New Types of Waste; New Solutions to Handling Waste

Lesson 1 | page 2 of 2

---

Name: \_\_\_\_\_

5. What are three actions the government has taken to encourage the development of resource recovery (RR) parks and eco-industrial zones?

---

---

---

---

---

**Instructions:** Write a paragraph in response to the following question. (5 points)

6. Do you think businesses would participate in e-cycling, build eco-industrial zones, or RR parks without government action? Why or why not?

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

## The Challenges of Environmental Laws

Lesson 2 | page 1 of 4

---

Name: \_\_\_\_\_

**Instructions:** After reading about the Zero Emission Vehicle (ZEV) Regulations, prepare to inform the class about this event by answering the following questions.

1. What board was created in 1947? What was its purpose?

---

---

---

2. What are two activities that were restricted in Los Angeles County to limit air pollution?

---

---

---

3. What does the U.S. EPA identify as the most common source of air pollution in the United States?

---

---

---

4. What program did the California Air Resources Board (ARB) start in 1990?

---

---

---

5. What did the program do?

---

---

---

## The Challenges of Environmental Laws

Lesson 2 | page 2 of 4

---

Name: \_\_\_\_\_

6. Were any cars produced that met the requirements?

---

---

---

7. What happened to those cars?

---

---

---

8. What happened to the law in 2003?

---

---

---

9. What two reasons did the auto companies give for opposing the manufacturing of these cars?

---

---

---

---

---

**Instructions:** After reading about the *Exxon Valdez* oil spill, prepare to inform the class about this event by answering the following questions.

1. What happened near Prince William Sound on March 24, 1989?

---

---

---

## The Challenges of Environmental Laws

Lesson 2 | page 3 of 4

---

Name: \_\_\_\_\_

2. What two parts of the region's economy have been severely affected?

---

---

---

3. How did the spill affect the native people who lived near Prince William Sound?

---

---

---

4. How did the spill affect people who fish for a living and rely on the Sound for their livelihood?

---

---

---

5. Who do people who fish for a living blame for the accident?

---

---

---

6. What did the Cordova Chamber of Commerce say about the spill?

---

---

---

7. a. In the lawsuit against ExxonMobil, how much was awarded in damages and punitive damages?

---

---

---

## The Challenges of Environmental Laws

Lesson 2 | page 4 of 4

---

Name: \_\_\_\_\_

- b. What happened to the amounts awarded in damages when ExxonMobil appealed the case, and then again, when the case went to the Supreme Court?

---

---

---

8. From ExxonMobil's point of view, what and who would have suffered from paying the cost of the punitive damages?

---

---

---

9. Who might actually have paid the cost of the damages?

---

---

---

Name: \_\_\_\_\_

**Instructions:** Use information from today's lesson to answer the following questions.

**The Exxon Valdez**

1. How did the oil spill affect Alaska's economy? (1 point)

---

---

---

2. How did the oil spill affect ExxonMobil? (1 point)

---

---

---

3. What role did government regulations play in the *Exxon Valdez* case? (2 points)

---

---

---

4. What role did the courts play? (2 points)

---

---

---

5. a. How could ExxonMobil get the money to pay its penalties? (2 points)

---

---

b. How might market competition prevent such an outcome? (2 points)

---

---

Name: \_\_\_\_\_

### The ZEV Regulations

1. How would the ZEV program benefit the people of California? (1 point)

---

---

---

2. Who opposed the law? Why? (2 points)

---

---

---

3. How did the state government change the law between 2003 and 2008? (2 points)

---

---

---

4. What were the opportunity costs of California modifying the law? (1 point)

---

---

---

5. If ZEV laws were applied to all auto companies doing business in the United States, how would they affect the competitiveness of the companies? (1 point)

---

---

---

Name: \_\_\_\_\_

6. How might the automakers have benefited from the law if they had not fought it so hard? (1 point)

---

---

---

7. In your opinion, supported by facts, why did the auto companies fight so hard to get the law changed? What had to be changed in the law to make it acceptable to them? (2 points)

---

---

---

---

Name: \_\_\_\_\_

**Instructions:** Answer the following questions as you view the presentation.

### Economic and Environmental Costs

This is a photograph of downtown Los Angeles on a smoggy day.

What economic and environmental costs arise from this situation?

---

---

---

---

### Ice Coverage of the Arctic

These satellite photographs compare the ice coverage area of the Arctic region in 1970 and in 2008.

These pictures indicate there is a reduction in the ice coverage in the Arctic region. What might be some of the consequences of this change?

---

---

---

---

---

---

Name: \_\_\_\_\_

### Carbon Dioxide Levels

This graph shows carbon dioxide levels in the atmosphere from 1960 to 2000.

What do you notice about the levels of carbon dioxide?

Many people believe that carbon dioxide levels are a factor in climate change.

Although there are many natural sources of carbon dioxide, levels of carbon dioxide in the atmosphere significantly increase when humans burn fossil fuels in the production of electricity and the powering of automobiles.

### Climate Change and the Economy

What makes global climate change an economic problem?

---

---

---

---

---

What are some possible solutions to this problem? What would you recommend?

---

---

---

---

---

---

---

---

Name: \_\_\_\_\_

### The Greenhouse Effect

#### How the greenhouse effect works:

When solar radiation gets to Earth, some of it passes through the atmosphere and is absorbed by Earth and some of it is reflected out into space.

The atmosphere contains “greenhouse gases,” such as water vapor, carbon dioxide, and methane. Increases in greenhouse gases cause the atmosphere to absorb more energy.

When the heat from Earth’s surface rises, greenhouse gases reflect it back to the surface, further warming Earth.

### Reducing Carbon Emissions

What would be ways that the government might get industries to reduce their carbon emissions?

---

---

How effective do you think they would be?

---

---

What would the costs be?

---

---

Could taxes be used? How would they work?

---

---

Could subsidies be used to encourage new energy sources? How effective would they be?

---

---

Name: \_\_\_\_\_

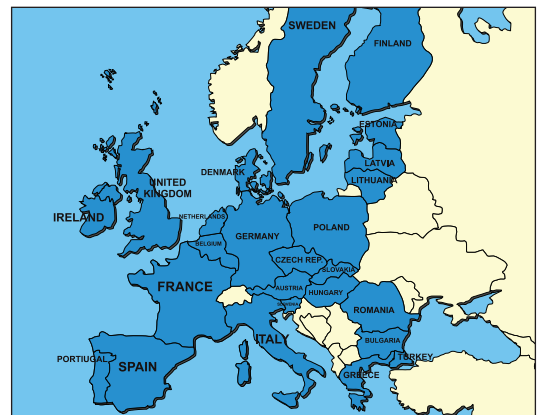

### Cap and Trade

#### What is cap and trade?

Cap and trade is a regulatory tool that places a mandatory cap on emissions while providing sources flexibility in how they comply. The goal of cap and trade is to steadily reduce carbon dioxide and other greenhouse gas emissions in a cost-effective manner. Because it may be easier for some businesses to reduce their emissions more than others, these businesses may sell, or trade, their allowances to businesses less able to reduce their emissions. Over time, the limits become stricter. This system rewards efficient businesses and ensures that the cap can be met with the lowest possible cost to businesses.

### Emissions Trading Systems

The European Union (EU) has the largest emissions trading program, called the EU emissions trading system (ETS). It has been in operation since 2005.

### Problems with Emissions Trading Systems

Phase one of the EU's ETS was not a complete success. Some critics claimed that too many carbon allowances were circulated, meaning that air quality would not improve substantially.

Phase two of the ETS began in January 2008, and many improvements have been made. Recent studies indicate that an emissions trading regime can help to reduce greenhouse gas emissions. It appears that this approach has facilitated the development of the market.

Do you think the emissions trading system could work in spite of the problems that critics point out about the European program? Why or why not?

---

---

---

---

---

Name: \_\_\_\_\_

### Carbon Offsets

**Carbon offsets** are financial instruments (measured in metric tons of carbon dioxide-equivalent) that represent reductions in carbon emissions. These instruments can be traded or purchased to help businesses maintain their emissions levels below an established cap.

Voluntary markets involve selling carbon offsets to consumers, businesses, and institutions. They differ from compliance markets, in which the government mandates emission reductions and offsets serve as a tool for meeting emission reduction targets.

Factories can buy offsets from other countries or receive credits for supporting projects that could be completed for lower costs than within the country. The **Clean Development Mechanism (CDM)** program is an example of this strategy.

In order to be a CDM, the project must meet the approval of inspectors. One of the project features they look for is **additionality**. An additionality requires proof that the project would not otherwise be built without the incentive of the sale of credits.

---

### Clean Development Mechanism

#### What is a Clean Development Mechanism (CDM)?

CDM is a program created under the Kyoto Protocol. It provides a method by which developing countries can undertake emission reduction projects and get paid for verified emission reductions. For example, an industrialized country with a greenhouse gas reduction commitment could invest in a carbon-reducing project in Kenya, where the cost of building a solar power plant would be cheaper than building one in Europe.

Additionality is one criterion adopted by the CDM program for offset projects.

---

### Additionality

#### What is additionality?

The criterion of additionality requires proof that a project would not otherwise be built without the incentive of the sale of credits.

The assessment of additionality is an important part of the process because it is one of the standards for reviewing CDM projects.

Name: \_\_\_\_\_

### Carbon Sinks

A “carbon sink,” such as a forest, is a natural absorber of carbon because trees naturally take in carbon and store it. Because the growth of new trees can reduce carbon levels in the atmosphere, some countries allow such projects to be counted as carbon offsets.

In some cases, it might cost less to plant a forest than to make a factory emit fewer emissions. The carbon sink has the extra benefit of giving a forest monetary value, other than just for lumber.

### Costs and Benefits of Carbon Sinks

What is a carbon sink?

---

---

---

---

What is the benefit to industry of a carbon sink?

---

---

Are there any costs to industry in using carbon sinks?

---

---

---

### Acid Rain

In the 1980s, acid rain—the contamination of rain with sulfur oxide and nitrogen oxide—became recognized as an environmental problem. Acid rain damages buildings and monuments, affects forests and lakes, and causes health problems.

What are the costs of acid rain?

---

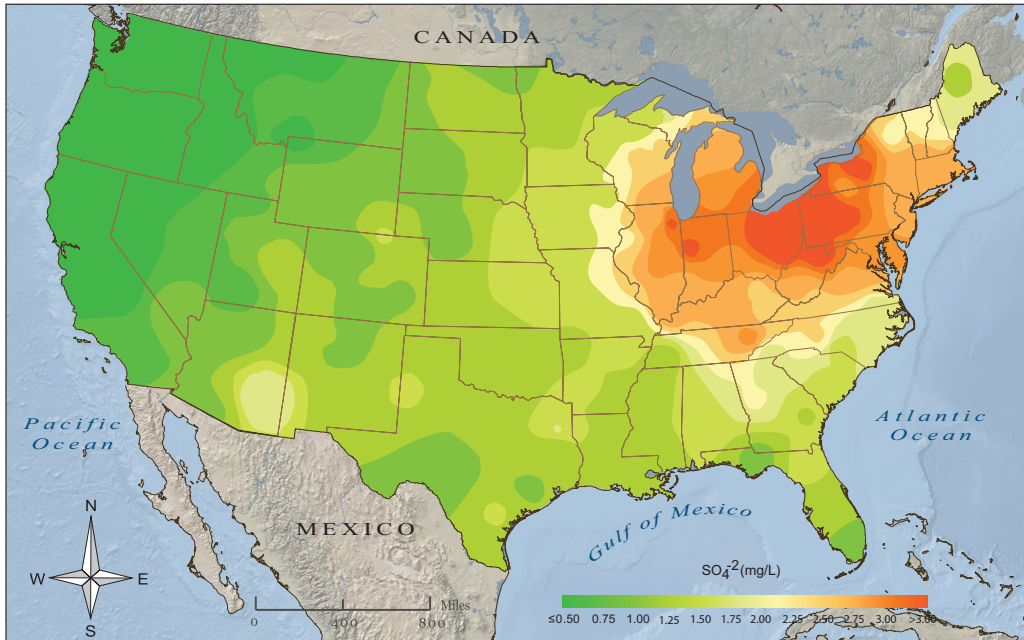

---

---

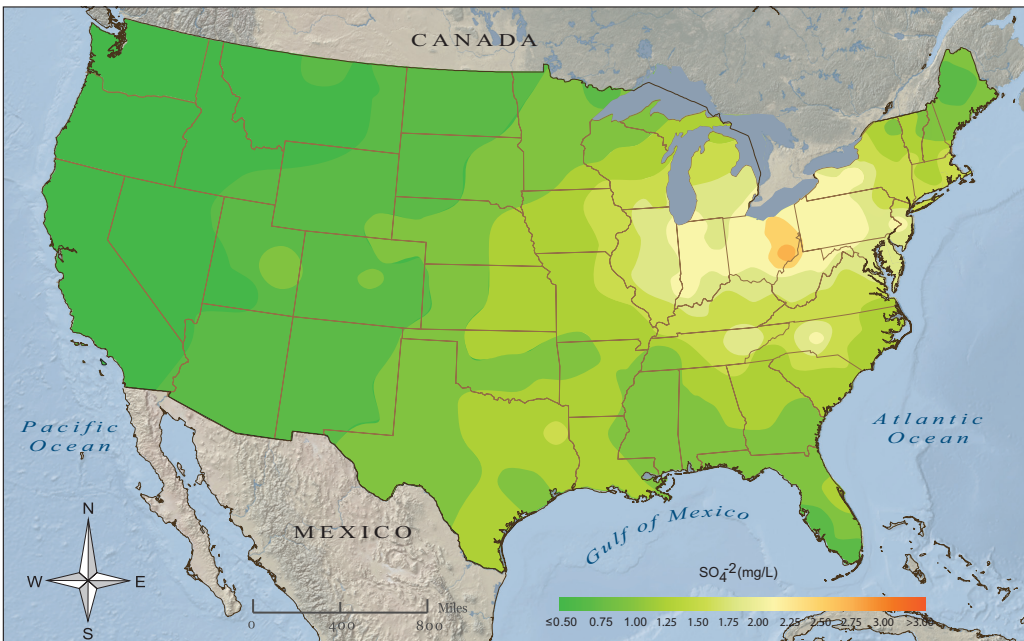

Name: \_\_\_\_\_

### Sulfate Ion Concentrations in 1985

In 1985, the highest concentrations of sulfate ions in the atmosphere were in the northeastern region of the U.S.

### Sulfate Ion Concentrations in 2005

By 2008, although the highest concentrations of sulfate ions in the atmosphere were still highest in that region, as a result of better emission controls, the concentration had decreased substantially. Thus, reducing some of the problems associated with acid rain.

Name: \_\_\_\_\_

### Sulfur Dioxide Reduction Program

#### Cap and trade programs can work!

In 1990, Title IV of the Clean Air Act amendment created a program to address the acid rain problem. Title IV's goal was to reduce sulfur dioxide in the atmosphere to below 1980 levels.

The Sulfur Dioxide Reduction Program was a success. In 1980, sulfur dioxide emissions were at 25.9 million tons, and in 2005, they were measured at 15 million tons.

This program used a cap and trade scheme.

---

### Environmental Protection and the Economy

#### No Longer “Environment” vs. “Economy”

The Sulfur Dioxide Reduction Program was criticized by many who thought, at first, that the program would hurt the economy. A report from the U.S. EPA about the U.S. experience using economic incentives to achieve environmental protection states that, “Economists have long understood that economic incentives have the potential to reduce pollution at a cost below that imposed by traditional regulations. The national experience of using economic incentives over the past decade reinforces this point of view.”

This bolsters the case of those who argue that programs, such as cap and trade can be a way for the government to protect the environment and support the economy.

## Cap and Trade System: Analysis

### Lesson 3

---

Name: \_\_\_\_\_

**Instructions:** Use information from today's lesson to answer the following questions. (5 points each)

1. What is a “cap and trade” program?

---

---

---

---

2. What role does the government play in making a cap and trade program successful?

---

---

---

---

---

3. What is an example of a successful cap and trade program? What was its goal? Give details of what it accomplished.

---

---

---

---

---

4. Instead of reducing the carbon emissions from its factories, a company pays someone to grow or maintain a forest. Does this help solve the carbon emissions problem? Why or why not?

---

---

---

---

---

Comparing Elements of Fiscal Policy

Lesson 4

Name: \_\_\_\_\_

**Instructions:** Fill in the following chart as you read and discuss the two case studies.

Case Study	Program Description	Type of Program	Problems with Program
Partnership for a New Generation of Vehicles			
Environmental Tax Shifting			

## Lesson 4 | page 1 of 2

**Instructions:** In this lesson you studied ways that governments encourage and discourage certain practices as a way of protecting the natural environment. Use the chart completed in class with the information from the case studies to write a one-paragraph response to each of the following sets of questions. (10 points each)

- [illegible]

## Lesson 4 | page 2 of 2

2. What type of fiscal policy is Environmental Tax Shifting an example of? Using plastic bags as an example, what are the benefits of this type of fiscal policy? What are the limitations? How does/did the policy affect the market? How effective has Environmental Tax Shifting been?

[illegible]

## Identifying Solutions

Lesson 5 | page 1 of 2

---

Name: \_\_\_\_\_

**Instructions:** As you read the scenario that your group was given, complete the following:

- Summarize the problem.
- Decide which policy or combination of policies would work best to resolve the environmental issue.
- Identify potential costs and benefits to businesses of your proposed solution. Include opportunity costs, marginal costs, and marginal benefits.

**Scenario #** \_\_\_\_\_

**Problem summary:**

**Proposed solution:**

## Lesson 5 | page 2 of 2

**Costs and benefits to businesses of the proposed solution (include opportunity costs, marginal costs, and marginal benefits):**

This image shows a single sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.

## Lesson 5 | page 1 of 2

**Instructions:** Write an essay comparing the effects of three governmental fiscal policies on one of the environmental problems discussed during class. (10 points per section, 30 points total)

- [illegible]

## Lesson 5 | page 2 of 2

[illegible]

California STATE BOARD OF  
EDUCATION
